Proud to be a family-run,
British manufacturer based
in Southend-on-Sea, Essex,
trading for over 30 years

Working in close partnership with our customers, we manufacture innovative and bespoke instrumentation.

We have over 50 years of knowledge and experience in our workshop. Our team of highly skilled technicians undertake a minimum apprenticeship of 5 years and are trained to manufacture instruments, rather than just repair them. This gives us 360 degree understanding of the challenge and the importance of correctly functioning medical devices.

We care immensely about the work we do, never forgetting that instruments we create and repair are responsible for saving lives.

We insist on controlling the quality of every item we manufacture, from the materials used to the rigorous procedures we apply to testing. Our range of supporting products are serviced and repaired in-house, ensuring we are always able to exceed our customers' expectations.

Customers can receive training, participate in factory visits or simply call their local representative for guidance with instrumentation or management.

Skill-sharing has been at the heart of our business for four generations and we frequently arrange workshops and attend events at which we can educate others.

Quality Assurance

We are an ISO 13485 accredited company.

Our comprehensive quality management system is in accordance with the requirements of the Medical Device Directive 93/42/EEC - Annex I & II, for temporary orthopaedic surgical implants - skeletal pins, wires, staples, guide wires - and all associated instrumentation.

All Surgical Holdings products undergo rigorous testing and inspection to applicable harmonised standards before leaving the factory. We offer CE marking on all Class I instrumentation, Class IIa and IIb implants, and can provide certificates of conformity for all materials used. Complete traceability throughout all aspects of the production process provides our customers with a fully documented quality control system.

All instrumentation carries a lifetime guarantee from the date of purchase on any fault found as a result of poor materials. This warranty is void, however, if repairs are carried out by anyone other than Surgical Holdings repair personnel, or if it is deemed to have been misused.

Please contact us or visit our website for current reprocessing instruction.

About Us

Surgical Holdings is a family run business, established for 30 years and counting. Based in Southend-on-Sea, we are an Award-winning British Surgical Instrument Manufacturer and Repairer, facilitating Sustainability in Surgery; through our range of Reusable Instruments and Laparoscopic Instruments, of which can be serviced in-house by our experienced and specialist technicians. Our Smart Repair service for Rigid Endoscopes and our 'as new' full Surgical Tray Refurbishments, save 50% in CO2 vs buying new. We also distribute key industry brands, including the Bookwalter Retractor.

Our **Mission** is to sustainably manufacture, service and distribute medical devices for the UK healthcare sectors and export partners worldwide. Expertly working to our specialisms, whilst promoting education and continual development of our employees, we maintain our dedication to our safety, unique skill, products and services.

Surgical Holdings' **Vision** is to be recognised by our stakeholders as the most passionate, authentic and knowledgeable Surgical Instrument Manufacturer and Service provider in the UK.

Our Company History

Our Services

Instruments are repaired to BS 5194 where possible, OEM specification in accordance with the recommendations laid out in MHRA 'Managing Medical Devices,' ensuring CE marking remains valid.

REPAIRED

High quality materials are used, providing full traceability as every part is recorded. Replacing instruments is avoided wherever possible.

TESTED

Independent testing helps benchmark repairs against industry standards.

UPCYCLED

If an instrument is not to our high standards or we can't repair it, we will replace it with a brand new one for the cost of a repair*. This ensures continual upcycling of your trays.

MARKED

Instruments can be laser marked, encoded and GS1 2D matrix marked at the same time as a repair.

ACCREDITED

Repairs are ISO 13485 accredited.

GUARANTEED

Customers receive an industry leading 18 month warranty as standard on all instrument repairs.

INSURED

We carry full product, professional liability and transit insurance.

DELIVERED

Standard turnaround times are 1 week, an express 2 day service is available.

Our instrument technicians carry out a minimum apprenticeship of 5 years and are trained to manufacture instruments rather than simply repair them. This gives us 360 degree understanding of the challenge and the importance of correctly functioning medical devices.

*Applies to selected instruments only, please get in touch for full details.

Surgical Instrument Set Refurbishment at North Devon District Hospital

Surgical Holdings have been recently managing a refurbishment programme for North Devon District Hospital. Here is their report on the implementation and success of their refurbishment programme so far.

Background

North Devon District Hospital is part of the Northern Devon Healthcare NHS Trust and the theatre complex has an inventory in excess of 1000 sets. The majority of sets are owned by the trust but this is supplemented with “Loan and Consignment” Orthopaedic sets.

Need for Change

With the need for clinical efficiency and productivity in the theatres instrumentation is required to be efficient and fit for purpose.

Limited sets are being used with a high turnover affecting compliance, sharpness, tension, etc. New instruments are available to replace old, well used stock but the capital required for the instrumentation is hard to obtain.

Implementation

To offset the need for capital to fund instrument replacements the CSSD and Theatres took the decision to try the Surgical Holdings option of refurbishing the instruments sets rather than disposing and purchasing new instruments. Instruments will either be refurbished back to new quality or replaced with new items for an inclusive price.

A “Basic” set was delivered to Surgical Holdings on the understanding the returned set would be assessed by the theatre staff to ensure the returned items met the requirements of the clinical team; e.g. sharpness, tension, colour, glare (lack of), etc.

The set passed the test and the remaining 22 “Basic” sets were refurbished on a rolling plan, the benefit of sending one set away at a time ensured a maximum stock level was available for clinical use.

Following the success of the 22 “Basic” sets a further 10 Oral Surgery Sets have been refurbished to the same standard.

Currently we have a Large Ortho Basic back after refurbishment awaiting theatre approval.

Implications

Finance

- No capital required to fund purchase
- Revenue spend to fund refurbishment

CSSD

- Minimum of sets out of service due to rolling programme
- Less incomplete sets as items are like new on refurbished sets, not needing further repairs

Theatre Staff

- Increased Clinical confidence – instruments like new
- Not subject to shortage of sets during process
- Reduction in procurement process – process agreed then rolling work plan
- Clinical staff sign-off regarding quality

The refurbishment of the theatre sets has allowed high usage instrumentation to be brought back up to a standard equal to new, this has been met with appreciation from theatre staff and has ensured clinical requirement for sets has not been compromised.

An Overview On

Forcep Jaw Types

You will see that forceps in our catalogue will have either a traditional serrated jaw or a different design which is known as atraumatic (or non-traumatic).

Traditional Serrated Jaw

The traditional serrated jaw is generally more robust and used on forceps where the areas are not as delicate.

Atraumatic Jaw

Atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Choosing the most suitable needle size

Our tungsten carbide inserts are available in a variety of styles. Choosing the most suitable needle size for each procedure helps give the surgeon maximum grip and control.

Coarse 0.65mm

For powerful needle holder patterns and wire twisters. Maximum holding capabilities for heavy needles or wire.

Micro 0.2-0.3mm

For micro needle holders such as Castroviejo, Microvascular and Mini-Ryder. For delicate needles and sutures between 7-0 and 10-0.

Standard 0.5mm

Used, for example, in Mayo-Hegar, Mathieu Needle Holders. For needles 3-0 and larger.

Smooth

Smooth tungsten carbide surface reduces damage to delicate needles and suture of 6-0 and finer.

Fine 0.4mm

For delicate needle holders such as Crile-Wood and DeBakey. For needles and sutures between 4-0 and 6-0.

Tungsten Carbide Needle Holders

Features and Benefits

- Jaw**
Tungsten carbide inserts bonded into the jaws for a long lasting, secure grip
- Bevelled Edges**
Prevents suture from snagging
- Laser Etching**
Date and catalogue number are etched for easy re-ordering. Laser etch will not harm instrument like traditional methods
- Satin Finish**
Reduces glare
- Ratchets**
Precisely cut for effortless locking/unlocking
- Teeth**
Fine, hard teeth, diamond cut into an insert of hardened tungsten carbide for superior needle grasping and suture tying capabilities
- Vacuum Brazing**
Combines bonding of the tungsten carbide insert with the simultaneous vacuum hardening of the instrument for greater durability and longevity
- Shanks**
Precision balanced for comfort and control
- Gold Handles**
For easy identification

The difference between Monopolar Electrosurgery and Bipolar Electrosurgery

There is one basic difference between bipolar and monopolar techniques. With monopolar electrosurgery, a probe electrode is used to apply the electrosurgical energy to the target tissue to achieve the desired surgical effect. The current then passes through the patient to a return pad and then back to the ESU generator to complete the circuit.

With the bipolar electrosurgical method a bipolar device, often a set of forceps, is used. The electrical current passes from one side of the forcep, through the target tissue to the other side of the forcep, then back to the generator. The electrical current is restricted to the tissue between the forcep, therefore not requiring the use of a grounding pad.

Taking care of your instruments

It is really important to ensure your instruments remain safe.

To do this, you will need a device which allows you to magnify distal areas of the instruments to check for:

- Burrs
- Corrosion
- Cracks

The history of our family business

We've had a long tradition of surgical instrument makers in the Coole family, going back way before our Managing Director, Daniel, was even born.

Fred Coole, started his ophthalmic instrument making business back in 1940. Instrument workshops used to be in the West End of London, close to key hospital sites.

Instrument makers would go to work dressed in 3 piece suits, as they would have to walk through showrooms where surgeons would be viewing instruments.

Refurbishment of orthopaedic sets

Refurbishing instruments can save up to **80%** of the cost of buying new, with compelling evidence to demonstrate effectiveness

Independent research¹ showed that instruments refurbished by Surgical Holdings had a 4x reduction in the amount of residual protein.

The smooth and polished surface has an increased cleaning efficacy, and all refurbishments come with an 18 month warranty as standard. Standard turnaround times are 1 week and an express 2 day service is also available.

Reference: ¹Data available on file.

Passivation Process

Did you know...

Stainless steel is self passivating which provides natural corrosion resistance.

Passivation is the natural process that occurs to a surgical instrument containing chromium. The chromium in the stainless steel naturally reacts with oxygen in the air, creating the very thin passive layer which protects the surface of the steel.

Artery Clamps

An Overview On

Atraumatic Jaws

Also known as non-traumatic, atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Atraumatic jaws are available as straight or curved.

Special Care Needed For Your Thoracic Instruments

Staining

Beware of the use of Saline during surgery. This can be very damaging to any instrument if not immediately rinsed after surgery. Saline is highly corrosive. The image shows damage to the passive surface of an instrument.

Rusting

Due to the nature of their use, Thoracic Retractors can tarnish or present rust easily. These retractors can be fully refurbished and passivated by Surgical Holdings.

Introducing the Bookwalter® Retractor System

 symmetry surgical
authorised distributor

The Bookwalter is widely used in Urology and General Surgery. The retractor is popular for Renal Transplant use and Radical Cystectomy (Bladder Removal).

Radical Cystectomy

Surgery to remove the urinary bladder. In men, removing the entire bladder (radical cystectomy) typically includes removal of the prostate and seminal vesicles. In women, radical cystectomy also involves removal of the uterus, ovaries and part of the vagina.

(Source: Mayo Clinic)

Prostate Removal

Radical prostatectomy is surgery to remove the entire prostate gland and surrounding lymph nodes as treatment for men with localized prostate cancer.

Renal Transplantation

The organ transplant of a kidney into a patient with end-stage kidney disease.

Own a Bookwalter® already?

Surgical Holdings can Repair & Refurbish your current retractor to make it look as good as new. We will also perform tests to ensure the retractor is functioning correctly and provide a report.
